Riyadh, Saudi Arabia

SUMMARY

Resourceful DevOps Engineer with 5 years of experience designing, implementing, and managing secure AWS cloud infrastructure. Proven ability to develop scalable microservices, optimize Linux servers, and configure robust CI/CD pipelines using Jenkins, GitLab CI/CD, and AWS services. Expertise in infrastructure automation, production support, monitoring, and disaster recovery.

EXPERIENCE

DevOps Engineer

SMSAMI Inc

06/2022 – 02/2026 Peshawar, Pakistan

- Support enterprise DevOps, SRE, production support, and automation activities for mission-critical client platforms.
- Architected and deployed scalable serverless microservices leveraging AWS Lambda and API Gateway.
- Engineered and sustained secure AWS cloud infrastructure, incorporating EC2, VPC, S3, RDS, and CloudFront.
- Administered Linux servers (Ubuntu, Amazon Linux, CentOS), including configuration, patch management, and issue resolution.
- Configured Apache and Nginx web servers with reverse proxy, SSL/TLS, and performance optimization.
- Instituted CI/CD pipelines using Jenkins and AWS CodePipeline to automate application deployments.
- Build and maintain GitLab CI/CD pipelines for automated build, testing, deployment, and controlled releases.
- Improve CI/CD reliability and standardize release processes to reduce deployment failures.
- Managed AWS Organizations and IAM Identity Center (SSO) across multiple accounts for centralized access control.
- Designed highly available multi-region architectures to support disaster recovery.
- Established monitoring and tracing with CloudWatch, CloudTrail, and AWS X-Ray for production issue detection.
- Automated infrastructure with AWS CloudFormation and Terraform for consistent provisioning.
- Automate infrastructure, application deployment, and environment configuration using Ansible, Python, and Bash.
- Develop automation scripts using Python and Bash to reduce manual operational work.
- Containerized applications with Docker and managed workloads on Kubernetes (Pods, Deployments, Services, ConfigMaps).
- Implemented scaling, rolling updates, and self-healing to improve availability and reliability.
- Troubleshoot production issues involving deployments, containers, Linux systems, and application environments.
- Participate in production incident response and troubleshooting for critical workloads.
- Performed root cause analysis (RCA) on recurring issues and implemented preventive automation.
- Collaborate with development, QA, security, and infrastructure teams to resolve deployment and production issues.

DevOps/Network Engineer

Evamp & Saanga

06/2021 – 05/2022 Islamabad, Pakistan

- Configure and maintain Windows operating systems, business applications, drivers, and system utilities.
- Troubleshoot network connectivity issues involving LAN, Wi-Fi, IP addressing, DNS, DHCP, and internet access.
- Perform routine backups, system updates, security checks, and preventive maintenance for reliable IT operations.
- Supported setup, configuration, and virtualization of Linux servers.

SKILLS

Cloud Platforms

AWS EC2 VPC IAM S3 Lambda RDS CloudFront EKS CloudWatch Route 53 GCP Cloud Functions Cloud Run Load Balancer

Containers & Orchestration

Kubernetes Docker Helm Kubernetes Networking Containerized Applications

Infrastructure as Code

Terraform AWS CloudFormation

GitOps & Automation

ArgoCD Ansible

CI/CD Tools

Jenkins GitLab CI/CD GitHub Actions AWS CodePipeline AWS CodeBuild AWS CodeDeploy

Operating Systems

Ubuntu Amazon Linux CentOS Windows

Monitoring & Logging

CloudWatch CloudTrail AWS X-Ray Log Monitoring

Networking

TCP/IP DNS DHCP LAN Wi-Fi VPC Routing Switching VPN Load Balancers Security Groups Network ACLs Subnets

Programming & Scripting

Python Bash

Security

IAM Secrets Manager KMS SSL/TLS Access Control Cloud Security Best Practices

Version Control

Git GitHub GitLab

- Monitored server logs, system performance metrics, and network infrastructure health.
- Configured VLAN assignments and switch port access to segment office LAN traffic.
- Diagnosed routing and gateway issues using ping, traceroute, and interface status checks.
- Supported site-to-site and remote VPN connectivity troubleshooting for internal resource access.
- Documented IP addressing plans and network diagrams for handover and troubleshooting.
- Designed multi-subnet VPC layouts with public/private tiers, route tables, and NAT/internet gateway patterns.
- Validated security group and network ACL rules to control traffic between application tiers.
- Created Python/Bash utilities for host uptime, disk usage, open ports, and service availability checks with alerts.

EDUCATION

Bachelor of Computer Science

University of Peshawar

09/2017 – 02/2022 Peshawar, Pakistan

Higher Secondary School Certificate

Islamia College Peshawar

09/2015 – 06/2017 Peshawar, Pakistan

CERTIFICATIONS

- AWS Solutions Architect Associate – Training (Udemy)
- Master Cloud-Native Infrastructure with Kubernetes – LinkedIn Learning
- Cloud Technical Support – Coursera
- Agile Scrum Fundamentals – Coursera
- The Bits and Bytes of Computer Networking – Coursera

LANGUAGES

- English – Professional Working Proficiency
- Pashto – Native
- Urdu – Native
